

How to Set your combination

1. Unlock the lock using the factory-set combination; line up 0000 with the LED light on the lock-housing.
2. Pull the cable out from the lock-housing.
3. Hold the lock-housing with the open end facing you.
4. Turn the outer metal ring clockwise until it stops. Refer to Step 1 image on the right.
5. Set the dials to the four numbers that you desire. Refer to Step 2 image on the right. Write the numbers down and do not forget them. The dials move half position and that means to change a number, the dial should be moved twice to move to the next or previous number.
6. Rotate the ring counter-clockwise until it stops. Take care to not move any of the dials while you are moving the ring. The new combination is now set. Refer to Step 3 image on the right.
7. Insert the cable back into the lock-housing.
8. At this point check the combination that is lined up with the light. This is the combination that has been set and may vary from the one you intended if you accidentally moved the dials during the procedure.
9. Turn the dials to scramble the numbers in order to secure the lock.
